

Miniature Low-Cost Pressure Transmitter

This cost-efficient pressure transmitter utilizes diffused silicon technology for general-purpose pressure measurement. The unit features a welded stainless steel construction, making it suitable for rugged environments and compatible with both gas and liquid pressure applications.

Product Overview

Compact Pressure Sensing Solution

The JYB-KO-M is a compact and economical pressure transmitter engineered for versatile industrial applications. Built with durable stainless steel, it offers reliable performance and compatibility with a wide range of media. Its small form factor and cost-effective design make it an ideal choice for seamless integration into OEM equipment and budget-conscious monitoring systems.

Key Features

Core Advantages

Compact Size, Stainless Steel Construction, Cost-Effective, High Accuracy, Easy Installation

Technical Specifications

Recommended Use

- OEM Equipment Integration
- Cost-Sensitive Industrial Applications
- General Pressure Monitoring
- Control Systems
