

Miniature Planetary Gearbox

This miniature planetary gearbox is designed for low-speed, high-torque applications. Its compact form factor incorporates a robust gear train for efficient power transmission.

Product Overview

Precision Miniature Planetary Gearbox

This miniature planetary gearbox is engineered for applications demanding high torque and low output speeds. Featuring a compact, micro-sized, and super-thin design, it provides efficient power transmission with minimal backlash, low noise, and reduced vibration. It is an ideal solution for precision motion control systems, robotics, and various industrial automation needs.

Performance Characteristics

Noise Level

Low Noise

Vibration

No Vibration

Performance Profile

1 Low

Output Speed

1 High

Torque

Design & Construction

Form Factor

Micro Size, Super Thin, Compact

Construction Material

Durable metal gearbox

Applications

Common Industries

- Automotive components
- Household appliances
- Communication equipment
- Industrial machines
- Medical devices
- Robotics
- Automation
