

Mining Operation Management Service

This service provides operation management for the Zhungeer Xinglong Heidaigou mining project. It includes support for surface facilities, underground mining equipment, and coal processing infrastructure.

Service Overview

Comprehensive Mining Operation Management

This specialized service provides full-scale operational management for mining sites, encompassing integrated surface facilities and underground extraction workflows. The management framework optimizes coal processing efficiency through advanced conveyor systems and heavy machinery deployment. By focusing on site-wide coordination, the service ensures reliable production output and enhanced safety standards across the entire mining infrastructure.

Operational Details

Core Infrastructure Managed

- Processing Plant
- Surface Storage Infrastructure
- Underground Extraction Machinery
- Coal Conveyor Systems

Operational Capabilities

Surface Mining Facilities, Underground Operations, Coal Processing, Conveyor Logistics
