

Mobile Asphalt Drum Mix Plant

Mobile plant provides continuous asphalt production through drum mixing. Its compact structure allows for easy relocation, reducing initial investment.

Overview

Mobile Asphalt Drum Mix Plant

The MDHB series is a mobile, continuous mixing asphalt plant designed specifically for small to medium-sized road construction projects requiring frequent relocation. Its compact, modular design ensures a minimal land footprint and easy transportation, making it ideal for confined work areas. By integrating heating, drying, and mixing functions into a single drum, it offers high energy efficiency and consistent asphalt quality.

Technical Specifications

Production Capacity

40 t/h

Minimum Capacity

240 t/h

Maximum Capacity

Total Power

75 kW

Min Power

420 kW

Max Power

Key Features

Key Advantages

- Highly mobile modular design for easy relocation
- Compact structure ideal for narrow or confined sites
- Precise aggregate feed control via load cells and variable frequency motor
- Optimized drying drum with external thermal insulation
- Low initial investment and high cost-effectiveness
