

Mobile Belt Conveyor

This mobile belt conveyor is mainly used for mechanized coal face crossheading transport, but can also be used for general coalface crossheading and tunnel boring transport. It is suitable for large transport volumes and long distances.

Product Overview

Industrial Mobile Belt Conveyor

The mobile belt conveyor is a versatile and efficient solution designed for material handling across mining, construction, and agricultural sectors. Its mobile frame construction allows for quick relocation and setup, providing significant flexibility for dynamic work environments. Engineered for reliability, the system features a robust build that supports heavy loads while minimizing material spillage and ensuring consistent throughput.

Key Features

Safety Equipment

- Emergency stop buttons
- Protective guards

Primary Applications

Mining, Coalface Transport, Tunnel Boring, Construction Sites, Agriculture

Performance

Operational Advantages

Low Transportation Costs • Adjustable Speed Control • High Throughput • Easy Relocation
