

Mobile Concrete Block Making Machine

This automatic mobile hollow concrete block making machine utilizes high-quality steel and hydraulic components for long life and minimal faults. It produces bricks with high density, high strength, accurate dimensions and good appearance.

Product Overview

High-Efficiency Mobile Block Production

This mobile egg-laying block making machine is engineered for efficient and cost-effective production of concrete blocks and pavers. Utilizing advanced engineering, the system is designed for easy operation and minimal maintenance, making it an ideal choice for small to medium-sized construction projects. Its mobile design allows for flexible on-site operation, supporting sustainable construction practices by producing eco-friendly building materials.

Technical Specifications

Key Features

- Linear structure for easy installation
- High-pressure double crank mechanism
- Advanced pneumatic and electric components
- High automation and intellectualization
- No pallet required

Production Capacity	25 blocks/cycle
Operation Mode	Single operator

Market & Application

Suitable Applications

Residential • Commercial • Industrial • Paving • Wall Construction

Market Popularity	Africa, Middle East
