

Mobile Crushing and Screening Plant

This mobile plant is a comprehensive system for material processing, suitable for mining, quarrying, and recycling. It integrates crushing, screening, and conveying stages to produce desired aggregate sizes.

Overview

Comprehensive Material Processing

The Crushing & Screening Integral Unit is a comprehensive system designed for efficient material processing in mining, quarrying, and recycling applications. This unit integrates various stages of crushing, screening, and conveying to produce desired aggregate sizes. It is engineered for high capacity, durability, and ease of maintenance, featuring robust steel frames and wear-resistant liners.

Technical Capabilities

Processing Stages

- Primary Crushing (Jaw/Impact)
- Secondary Crushing
- Tertiary Crushing
- Vibrating Screening
- Conveyor Transport

Suitable Applications

Mining, Quarrying, Recycling

Design Features

Construction Features

Robust Steel Frames • Wear-resistant Liners • Automated Control Systems

Customization

Yes
