

Mobile Light Tower Generator

The mobile light tower generator is a self-contained unit designed to provide portable lighting and power for various applications. It features a robust generator mounted on a wheeled chassis with a telescoping mast supporting high-intensity floodlights, offering adjustable illumination.

Overview

Portable Lighting and Power Solution

This mobile light tower generator is a robust, self-contained unit designed to deliver reliable illumination and auxiliary power in demanding environments. Mounted on a wheeled chassis for superior maneuverability, it features a telescoping mast equipped with two high-intensity floodlights to cover large work areas. Ideal for construction sites, emergency response operations, and outdoor events, this unit combines portability with powerful performance.

Technical Specifications

Power Source	Gasoline
Lighting Configuration	Dual high-intensity floodlights
Mobility Features	Wheeled Chassis, Portable, Telescoping Mast

Control & Connectivity

Control Panel Features

- Multiple power outlets
- Individual light switches
- Generator controls
