Overview

Mobile Wet Mix Macadam Plant

The WBZ Series mobile wet mix macadam plant is a specialized road construction solution designed for the efficient production of stabilized soil and cement-treated base (CTB). Featuring an integrated, modular design with a horizontal square cement silo, this plant is engineered for rapid deployment and easy relocation between project sites. Its compact structure houses the feeder, mixer, belt conveyor, and finish storage bin in a single transportable module, making it an ideal choice for projects requiring frequent site mobility.
