

Mobile Material Screening Machine

This mobile machine is used for separating materials like soil, gravel, or construction debris. It features a hopper, conveyor belts, and a screening mechanism, and is mounted on wheels for transport.

Overview

Mobile Material Screening Solutions

The MPI-40 mobile material screening machine is designed for efficient on-site material separation and processing. Featuring a robust hopper system and integrated conveyor belts, this unit excels at sorting gravel, soil, and construction debris. Its mobile, wheel-mounted design allows for rapid deployment and easy repositioning across various job sites, maximizing operational flexibility.

Technical Specifications

Mobility

Mobile • Wheel-mounted

Model Identifier

MPI-40

Primary Applications

Material Screening, Sorting, Construction Debris Processing, Aggregate Separation
