

Mobile Oil Processing Rig

This mobile oil processing rig is designed for on-site oil extraction and processing. The system features a drilling rig mounted on a truck chassis, providing mobility and efficient setup for field operations.

Overview

Mobile Oil Processing Rig

This mobile oil processing rig is a self-contained solution designed for on-site oil extraction and processing operations. Mounted on a heavy-duty truck chassis, the system offers exceptional mobility and efficient setup capabilities for various field locations. It is equipped with a comprehensive suite of machinery, including a lattice boom and drawworks system, ensuring reliable performance during extraction tasks.

Technical Specifications

Key System Components

- Truck-mounted chassis
- Drilling rig
- Lattice boom
- Drawworks system
- Safety barrier system

Operational Features

Mobile, On-site Processing, Field Ready, Self-Contained

Safety and Design

Safety Equipment

Safety barrier installed
