

Mobile Power Transformer

This mobile power transformer is designed for installation in locations without significant interference from transformer insulation gas steam. It is designed for stepping up or stepping down voltage levels in power transmission applications.

Product Overview

Industrial Mobile Power Transformer

This rugged mobile power transformer is engineered for demanding industrial power conversion applications. Housed in a durable metal enclosure and equipped with integrated analog monitoring instrumentation, it provides reliable voltage management. Its mobile base allows for flexible deployment across various industrial settings, ensuring stable and efficient power transmission.

Operating Environment

Ambient Temperature	-15°C to +40°C
Maximum Altitude	1000 m
Relative Humidity	90 %
Installation Requirements	Install in environments free from gases, steam, or chemicals that may negatively impact transformer insulation.

Technical Specifications

Type	
SG Three Coherent Transformer	
Mobility	Yes
