

Mobile Roof-Mounted Coolant Unit

This roof-mounted coolant unit is designed for mobile applications. It provides efficient cooling and temperature regulation for temperature-sensitive cargo.

Overview

Mobile Cooling Solution

This roof-mounted coolant unit is engineered specifically for mobile applications, ensuring reliable temperature control for sensitive cargo during transport. The system integrates multiple high-efficiency cooling fans and a robust condenser within a durable, weather-resistant housing. Designed for seamless installation on transport vehicles, it provides consistent performance and optimal thermal regulation.

Technical Specifications

Key Features

- Multiple high-performance cooling fans
- Integrated condenser unit
- Durable, ruggedized housing
- Optimized for mobile transport environments

Compliance

Q.T.A Certified

System Type

Roof-Mounted Mobile Coolant Unit

Primary Application

Transport Vehicles, Temperature-Sensitive Cargo, Mobile Logistics
