

Mobile Satellite Communication System

This mobile satellite communication system is mounted on a truck chassis. It is designed for rapid deployment and communication in remote areas, providing essential connectivity for various applications.

System Overview

Ruggedized Mobile Satellite Connectivity

The Mobile Satellite Communication System is an integrated solution designed for rapid deployment in the most challenging remote environments. Mounted on a heavy-duty truck chassis, this system ensures reliable signal transmission and reception through its advanced large-scale parabolic antenna. Housed within a durable, camouflage-painted container, it protects sensitive electronic equipment while providing critical communication capabilities for field operations.

Technical Features

Deployment Method

Mobile • Rapid Deployment • Vehicle-Mounted

Antenna System

Large Parabolic Antenna

Environmental Design

Equipment Housing

- Camouflage exterior
- Hard-shell container
- Weather-resistant design
