Product Overview

Integrated Mobile Crushing Solution

The Mobile Tire Crushing Plant features an integrated working pattern that eliminates complex infrastructure setup, significantly reducing site preparation time and material consumption. Designed with high mobility, the unit utilizes vehicle-mounted traction for immediate deployment across diverse terrains, from standard roads to rugged mountain paths. Its compact, space-optimized layout allows for efficient independent operation or flexible configuration combinations to meet specific fine and coarse crushing requirements.

Technical Features

Performance Benefits

- Integrated complete set unit design
- Reduced transportation requirements for raw materials
- High chassis for improved off-road maneuverability
- Small turning radius for tight site access
- Easy maintenance and reliable performance

Available Crushing Units

Jaw Crusher, Impact Crusher, Cone Crusher, Screening Station

Operational Specifications

Mobility Configuration

Tyre-mounted • Mobile • Integrated

Operational Adaptability

Capable of both independent single-machine work and multi-unit combination setups for coarse and fine crushing.
