

Mobile Vertical Construction Lift Platform

This mobile construction lift platform is designed for vertical lifting of personnel and materials on construction sites. It features a robust steel frame, a spacious work platform with safety railings, and a vertical mast for stable elevation.

Product Overview

Mobile Vertical Construction Lift Platform

This mobile vertical construction lift platform is engineered for the efficient and safe transport of personnel and materials at height. Featuring a robust steel frame and a spacious work platform with integrated safety railings, it ensures stability during operation. The unit is equipped with a reliable motor and controlled lifting mechanism, making it an ideal solution for building maintenance, installation, and various repair tasks on construction sites.

Technical Specifications

Mobility	Mobile (Wheel-mounted)
Frame Material	Robust Steel
Safety Features	Safety Railings, Controlled Ascent, Controlled Descent

Applications

Suitable Applications

- Building Maintenance
- Installation Work
- Repair Work
- Personnel Lifting
- Material Transport
