

Modified Truss Head Self-Tapping Screw

This modified truss head self-tapping screw is designed for secure fastening. It features a wide, low-profile head for increased bearing surface and a self-tapping thread for efficient installation without pre-drilling.

Overview

Modified Truss Head Self-Tapping Screw

This modified truss head self-tapping screw is engineered for secure fastening in industrial and machinery applications. It features a wide, low-profile head that provides an increased bearing surface for superior holding power. Designed for efficiency, the self-tapping thread allows for installation without the need for pre-drilling, making it an ideal choice for textile machinery and general industrial assembly.

Technical Specifications

Head Style	Modified Truss Head
Fastener Type	Self-Tapping Screw
Installation	Self-tapping (no pre-drilling required)

Application

Primary Industries	Machinery, Industrial Parts, Apparel Machinery, Textile Machinery
--------------------	---

Performance

Key Benefits

- Wide, low-profile head for increased bearing surface
- Efficient installation without pre-drilling
- Durable construction for long-lasting performance
