

Modular Air Caster Rigging System

Air caster rigging systems feature super low profiles, ensuring safety during movement. These modular systems are designed for moving heavy loads with ease.

Product Overview

Industrial Air Caster Rigging System

This modular air caster rigging system utilizes compressed air technology to create a frictionless air film, allowing for the easy and safe movement of heavy machinery. Designed for industrial environments, the system features a super low profile and operates without electricity, making it safe for use in hazardous areas. It protects expensive flooring from marks and damage while enabling a single operator to move loads with precision and ease.

Technical Specifications

Standard System Capacity

100 tons

Max Capacity

Power Source

Compressed Air

Safety & Compliance

No-spark, Non-electric, Hazardous Area Safe, Floor Protection

System Configuration

Available Configurations

- 4-module configuration
- 6-module configuration
- Customizable layouts available

Included Components

- Air bearing modules
- Control panels with gauges and valves
- Air hoses with quick-connect fittings
- Distribution manifolds
