

# Modular Air Caster Rigging System

This air caster rigging system features a super low profile for safe movement. Its modular design allows for customized scalability based on load requirements.

## Overview

### Modular Air Caster Rigging System

This modular air caster system is designed for safe and efficient heavy load movement in industrial environments. Utilizing compressed air to create a near-frictionless film, it allows for the easy relocation of heavy machinery without damaging floors. The system is spark-free and requires no electrical power, making it suitable for hazardous areas while offering a user-friendly, low-profile design that can be operated by a single worker.

## Technical Specifications

### Standard System Capacity

**100 tons**  
Max Capacity

Power Source	Compressed Air
Safety Features	No-spark, No electrical power, Low profile, Non-marking
Customization	Yes

## Operational Details

### Key Operational Benefits

- Floor protection (no-mark technology)
- Easy to use with no technical skills required
- One-worker operation capability
- Suitable for hazardous environments
