

# Modular Air Casters for Heavy Load Movement

Modular air casters move heavy loads using compressed air. The air bearings create a thin layer of air between the load and the floor, allowing for nearly frictionless movement.

## ADDITIONAL IMAGES

## Product Overview

### Precision Heavy Load Movement

These modular air casters utilize compressed air technology to create a thin, frictionless layer between heavy loads and the floor. The system includes a portable air control console, air tubes, and modular air bearings designed for smooth, omnidirectional movement. This solution is ideal for industrial environments requiring precise positioning, cleanroom compatibility, and minimal floor impact.

## Technical Specifications

### Load Capacity

**10 MT**

Minimum Capacity

**100 MT+**

Maximum Capacity

### Modular Configuration

- Four air module system
- Six air module system
- Customizable configurations available

### Included Components

Portable air control console, Air tubes, Air modules, Airbags

## Quality & Assurance

### Pre-shipment Testing

- Factory internal testing
- Third-party inspection support
- Client-led testing

### Warranty Coverage

1-year quality guarantee with replacement or refund policy for defects.

### Quality Control

Yes
