

Modular Air Casters with Six Air Modules

Modular air casters are designed for moving heavy loads with ease and precision. These casters utilize compressed air to create a thin layer of air between the caster and the floor, effectively floating the load.

Product Overview

Modular Air Caster System

These modular air casters are designed for moving heavy, awkward, or delicate loads with ease and precision. By utilizing compressed air to create a thin film between the caster and the floor, the system allows for smooth, omnidirectional movement with minimal friction. The configuration features six integrated air modules to ensure optimal weight distribution and stability during operation.

Technical Specifications

Load Capacity

60 T

Capacity

Air Modules

6 units

Operational Features

Best For

- Manufacturing
- Warehousing
- Heavy Equipment Transport
- Delicate Material Handling

Movement

Omnidirectional, Low Friction, Smooth Movement

Surface Compatibility

Smooth, level surfaces
