

Modular Air Handling Unit for Clean Rooms

This modular air handling unit is designed for clean room applications. It features multiple sections for filtration, cooling, heating, and air distribution to maintain precise environmental conditions.

Overview

Clean Room Modular Air Handling Unit

This modular air handling unit is specifically engineered for high-performance clean room environments, offering a flexible, customizable design to meet precise air quality requirements. Featuring a patented structural design, the unit ensures long-lasting durability and reliable operation with minimal noise output. It supports a wide range of applications, providing a scalable solution for facilities requiring rigorous temperature, humidity, and airflow control.

Performance Metrics

Air Volume Capacity

2000 m3/h

Minimum Air Volume

300000 m3/h

Maximum Air Volume

Design & Construction

Customization

Fully Customizable • Modular Design

Key Features

- Patented structural design
- Low noise operation
- High-durability construction
- Flexible modular configuration
