

Modular Cabinet Frame Connector

This modular connector is designed for constructing frameworks and supports in cabinet systems. Its modular design allows for flexible configurations, making it suitable for various applications in cabinet construction and support systems.

Product Overview

Versatile Modular Cabinet Framework

The Modular Cabinet Frame Connector is a robust solution designed for constructing frameworks and support systems in industrial and electronic settings. Featuring a versatile, modular design with multiple connection points, it allows for flexible configurations and secure, stable assembly. Constructed from durable, galvanized steel, this system is built to withstand demanding environments while providing essential features like cable management integration.

Technical Specifications

Key Features

- Perforated channels for cable management
- Square tubing design
- Cylindrical extension points
- High-stability structural support

Applications

Electronic Cabinets • Industrial Frameworks • Support Systems

Material

Galvanized Steel

Connection Type

Three-way connection, Modular, Corner piece
