

Modular Communication Terminal Block

This modular communication block is designed for structured cabling and telecommunications applications. It features insulation displacement connectors (IDCs) for terminating wires without stripping insulation.

Product Overview

Professional Communication Connectivity

This modular communication terminal block is engineered for high-density structured cabling and telecommunications environments. Featuring advanced insulation displacement connectors (IDCs), it allows for rapid wire termination without the need for stripping insulation. The durable construction ensures a secure, organized, and reliable method for distributing critical communication signals in professional network setups.

Technical Specifications

Termination Technology	Insulation Displacement Connector (IDC)
Design	Modular
Primary Application	Telecommunications, Structured Cabling, Signal Distribution

Physical Characteristics

Connection Density	High Density
Body Material	Durable Industrial Plastic
