

Modular Conveyor Belt with Stainless Steel and Plastic Options

This conveyor belt features interconnected rectangular links forming a mesh-like structure. It is available in stainless steel or a durable plastic composite, providing a robust and reliable conveying solution.

Product Overview

Modular Conveyor Belt System

This modular conveyor belt is engineered with an interconnected, mesh-like structure featuring rectangular links. Built for industrial durability, it is available in both stainless steel and high-performance plastic composite materials. Its open design ensures optimal drainage and airflow, making it an ideal solution for versatile material handling and transport applications.

Design & Construction

Key Features

- Open mesh structure for drainage
- Enhanced airflow capabilities
- Modular design for easy repair
- Customizable configuration

Material Options	Stainless Steel, Plastic Composite
Structural Design	Modular, interconnected rectangular links

Applications

Suitable Applications

Industrial Transport • Material Handling • Wet Environments • High-Airflow Processes
