

# Modular Electrical Terminal Blocks

These modular terminal blocks are designed for secure and organized electrical wiring connections. Their robust construction features metal inserts for enhanced conductivity and easy customization.

## Product Overview

### Professional Modular Terminal Blocks

These modular electrical terminal blocks are engineered for high-current applications and reliable power distribution in industrial control panels. Constructed from high-quality brass with acid-pickling treatment, they offer excellent oxidation resistance and long-term durability. The precision-manufactured design ensures seamless installation and prevents reinstallation difficulties, making them a robust solution for demanding electrical environments.

## Material & Construction

Primary Material	High-quality Brass
Surface Treatment	Acid-pickling treatment
Key Features	High current capacity, Oxidation resistant, Modular design, Precision engineered

Installation Type	Modular

## Compliance & Usage

### Recommended Uses

- Control panels
- Power distribution systems
- Industrial electrical installations
