

Modular Ringlock Scaffolding System

This modular scaffolding system features an octagon locking mechanism for secure and rapid assembly. Its design allows for various configurations to suit diverse construction and maintenance applications.

Overview

Modular Ringlock Scaffolding System

This high-strength modular scaffolding system utilizes a unique octagon locking mechanism designed for rapid and secure assembly. Engineered for versatility, it supports a wide range of configurations suitable for diverse construction and maintenance projects. The system features hot-dip galvanized components for superior corrosion resistance and long-term durability in demanding environments.

Technical Specifications

| | |
|-------------------|--|
| Material & Finish | Hot-dip galvanized high-strength steel |
| Locking Mechanism | Octagon lock system |

Features & Safety

| | |
|-------------------|--|
| Safety Compliance | Safety Standard Compliant |
| Key Features | Modular Design, Rapid Assembly, Adjustable Base Plates, Integrated Ladder Access |
