

Modular Scroll Chiller Heat Pump

High-efficiency scroll chiller and heat pump series are designed for modular installation. These units feature multiple compressors for staged capacity control and optimized heat exchangers for enhanced performance.

Overview

Modular Scroll Chiller and Heat Pump

This high-efficiency scroll chiller and heat pump series is engineered for versatile modular installation in commercial and industrial settings. By utilizing multiple compressors for staged capacity control, the system ensures precise temperature management while maintaining optimal energy efficiency. The unit features robust construction and optimized heat exchangers, providing a reliable solution for diverse heating and cooling demands.

Key Features

Key Features

- Modular design for flexible installation
- Staged capacity control via multiple compressors
- Optimized heat exchanger technology
- Robust construction for industrial reliability

Applications

Suitable Applications

Commercial, Industrial, Temperature Control
