

Modular Scroll Water/Ground Source Heat Pump

This high-efficiency heat pump is designed for water and ground source applications in industrial and commercial environments. The modular scroll type ensures reliable and efficient temperature control with low noise operation.

Overview

High-Efficiency Climate Control

This modular scroll type water/ground source heat pump is engineered for demanding industrial and commercial environments. It integrates advanced scroll compressors to deliver reliable, energy-efficient heating and cooling performance. Designed with a focus on operational longevity and ease of maintenance, this unit ensures stable temperature control while maintaining low noise levels.

Technical Specifications

Source Compatibility

Water Source • Ground Source

Application Scope

Industrial, Commercial

Compressor Technology

Modular Scroll

Operational Features

Key Operational Benefits

- Energy-saving scroll compressors
- Low noise operation
- Robust construction
- Advanced control system
- Easy installation and maintenance
