

# Modular Stainless Steel Water Tank

This modular water tank is constructed from stainless steel panels bolted together. It is suitable for potable water storage, fire suppression systems, and industrial water applications.

## Product Overview

### Modular Stainless Steel Solution

This detachable water tank is a high-performance modular storage solution engineered for long-term durability and ease of installation. By utilizing a bolted connection system instead of traditional welding, the design eliminates corrosion-prone points and simplifies both assembly and maintenance. Constructed from high-quality stainless steel, this system is built to last up to 50 years while offering exceptional resistance to cracking and seismic activity.

## Key Advantages

### Main Benefits

- No weld points for enhanced structural integrity and corrosion resistance
- Modular design allows for easy dismounting, reassembly, and reuse
- High-quality stainless steel construction ensures a 50-year lifespan
- Economical use of raw materials compared to traditional tanks
- Time-saving installation process

## Technical Features

### Performance Metrics

**50 years**  
Lifespan

### Material & Construction

Stainless Steel, Anti-Corrosion, Anti-Crack, Quakeproof, Bolted Connection, Edible Silicon Seal

## Applications & Usage

### Suitable Applications

Potable Water Storage • Fire Suppression Systems • Industrial Water Applications
