

Modular Steel Scaffolding System

This modular scaffolding system is made from galvanized steel tubing. It features adjustable height, cross bracing, and a platform, providing a safe and efficient workspace for construction, maintenance, and repair.

Product Overview

Professional Modular Scaffolding

This modular scaffolding system is engineered from high-grade galvanized steel tubing to provide a robust and reliable platform for elevated construction and maintenance tasks. Its modular design ensures seamless assembly and disassembly, allowing for rapid deployment on various job sites. By prioritizing structural stability with integrated cross-bracing and adjustable height components, this system offers a safe and efficient work environment for professional projects.

Technical Specifications

Key Features

- Galvanized steel tubing
- Adjustable height configuration
- Integrated cross bracing
- Durable work platform

Material	Galvanized Steel
System Type	Modular, Adjustable

Applications

Suitable For

Construction • Maintenance • Repair Projects
