

Modular Uninterruptible Power Supply System

This high-capacity uninterruptible power supply (UPS) system is designed for industrial or data center applications. The system includes three modular units, each equipped with a control panel and ventilation.

Overview

High-Capacity Modular UPS System

This modular uninterruptible power supply system is engineered for industrial and data center environments requiring robust energy backup. The scalable architecture allows for flexible deployment, with each module featuring integrated control panels and advanced ventilation systems. Designed for mobility, the units are mounted on wheels to ensure easy maneuverability and maintenance in professional settings.

Design and Build

Construction	Modular
Mobility	Yes
Cooling System	Integrated active ventilation

Key Features

Primary Applications	Data Center, Industrial, Enterprise Power Backup
