

Mold and Tooling Design Services

Specialized mold and tooling design services provide custom OEM solutions. These services offer precision engineering and advanced manufacturing capabilities for efficient production of complex parts.

Overview

Precision Mold and Tooling Solutions

This service provides comprehensive mold and tooling design with custom-made OEM solutions tailored to complex manufacturing requirements. Utilizing advanced R&D capabilities and rigorous testing standards, the service ensures high-quality output and consistent performance for intricate components. The process integrates strict quality control and standardized management systems to guarantee reliability and timely delivery for high-volume production applications.

Manufacturing Capabilities

Specialized Components

- Automobile parts molds
- IC connectors
- Lead frames
- Electrical connection components
- Motor fixed rotors
- Precision mold spare parts

Target Industries

Automotive, Semiconductor, Electronics, Electrical Engineering

Quality and Standards

Management Systems

ERP Integrated • Standardized Process Management • Continuous Improvement

Quality Assurance

- In-house laboratory testing
- Dedicated R&D team
- Precision engineering standards
- Quality and delivery time guarantees
