

Mold Temperature Control Unit for Plastics Processing

This precision temperature control unit is designed for plastic molding applications. It features a digital display, robust construction, and mobility casters.

Product Overview

Precision Mold Temperature Control

This industrial temperature control unit is engineered specifically for plastic processing applications such as injection molding. It features a high-precision digital display for consistent thermal monitoring and is built with a robust chassis to withstand demanding manufacturing environments. Equipped with mobility casters, it offers flexible deployment across the production floor to maintain optimal mold temperatures.

Key Features

Construction

Industrial Grade • Robust Design

Interface

Digital Display

Mobility

Yes

Suitable Applications

Plastic Injection Molding, Plastic Processing
