

# Monitor Circuit Board

This is a circuit board designed for use in monitors. It contains capacitors, resistors, integrated circuits and other components.

## Product Overview

### Monitor Circuit Board Assembly

This high-quality circuit board is designed for reliable monitor performance, serving as a critical power supply or control component. It features a robust layout populated with essential electronic elements including capacitors, resistors, and integrated circuits. Engineered for compatibility with standard monitor architectures, it ensures stable signal processing and power distribution for consistent display operation.

## Technical Specifications

### Connectivity Features

- Red high-voltage wiring
- White ribbon data cables
- Integrated wiring harnesses

### Application Compatibility

CRT Monitor • LCD Monitor

### Key Components

Capacitors, Resistors, Integrated Circuits, Transformers

### Primary Function

Power Supply / Control Board
