Overview

Integrated Bottling Solution

The Monoblock Mineral Water Bottling Machine streamlines production by integrating washing, filling, and capping processes into a single, compact frame. This unified design utilizes a synchronized driving system to ensure stable operating speeds and high efficiency. Designed for versatility, the machine can handle various bottle types, provided the neck specifications remain consistent.

Key Features

Operational Benefits

- Washing, filling, and capping integrated in one unit
- Single driving system for stable speed
- Low noise operation
- Compact footprint
- Single-operator capability
- Compatible with multiple bottle types (same neck required)

Conveyor System

Conveyor System Components

- Single or multi-row configuration
- Engineering plastic or stainless steel belt options
- Adjustable speed motors with converter
- Turn conveyor integration
- Water accumulation tray
- Integrated cable tray

Customization

Customization Requirements

Production capacity per hour, Bottle material (plastic/glass), Cap type (screw/aluminum)
