

Monocrystalline Half-Cut Solar Panel, 430-450W

Monocrystalline solar panel with half-cut cells generates between 430W and 450W. It provides enhanced shading tolerance and improved temperature coefficient for long-term performance.

Product Overview

High-Efficiency Energy Solution

These monocrystalline solar panels utilize advanced half-cut cell technology to maximize power output and energy conversion efficiency. Designed for versatility, they are suitable for residential, commercial, and large-scale utility solar installations. The rugged construction ensures long-term reliability and high performance even in challenging environmental conditions.

Performance

Rated Power Output

430 W

Minimum Power

450 W

Maximum Power

Technical Specifications

Cell Type	Monocrystalline Half-Cut
Key Features	Half-Cut Technology, High Shading Tolerance, Low-Light Performance, High-Temperature Durability

Applications

Recommended Use

- Residential solar installations
- Commercial solar systems
- Utility-scale solar power plants
