

Monocrystalline PERC Solar Panel 385W

This high-efficiency monocrystalline PERC solar panel features 12BB cell technology for enhanced performance. It is designed for residential, commercial, and utility-scale applications, offering excellent low-light performance and durable construction.

Overview

High-Efficiency Solar Solution

This high-efficiency monocrystalline PERC solar module utilizes advanced 12BB cell technology to deliver enhanced performance and reliability across various applications. Designed for residential, commercial, and utility-scale projects, it offers superior energy yield even in low-light conditions. Its durable construction ensures long-term stability and resilience against harsh environmental factors, helping to reduce overall system costs.

Performance

Rated Power Output

385 W

Power Output

Cell Technology

Monocrystalline, PERC, 12BB

Key Features

Suitable Applications

- Residential
- Commercial
- Utility-scale

Performance Benefits

High Efficiency • Low-light Performance • Durable Construction • Superior Temperature Coefficient
