

# Mortar Removal Blade for Angle Grinders

This blade is designed for cutting out mortar joints and expansion joints in concrete and masonry restoration. It is also used for making grooves on the surface of construction materials.

## Product Overview

### Professional Mortar Removal Solutions

This high-performance mortar removal blade is engineered for precision masonry restoration and joint cleaning. Featuring segmented diamond grit edges, it allows for fast, smooth cutting through granite, concrete, and brick. It is the ideal tool for professionals requiring efficiency in tuckpointing and expansion joint maintenance.

## Technical Specifications

Material Compatibility	Granite, Concrete, Brick, Masonry
Application Method	Dry cutting

## Design Features

### Construction Details

- Segmented diamond grit edges
- Durable steel core for stability
- Optimized for angle grinders

### Primary Use Cases

Mortar joint removal • Expansion joint cutting • Tuckpointing • Brick repair
