

Motor Grader for Road Construction

The motor grader is a heavy-duty construction machine primarily used for creating flat surfaces. It features a long, adjustable blade positioned between the front and rear axles and can be angled and tilted to precisely grade and level soil, gravel, and other materials.

Product Overview

Heavy-Duty Road Construction Motor Grader

This motor grader is a professional-grade heavy construction machine engineered for high-precision surface leveling and grading. Featuring a robust design with a long, adjustable blade situated between the axles, it allows for precise angling and tilting to manage soil, gravel, and construction materials effectively. It is an essential asset for site preparation, road maintenance, and paving projects, offering the versatility needed for both leveling and material spreading.

Technical Capabilities

Blade Configuration

- Adjustable blade positioning
- Tilttable blade mechanism
- Mounted between front and rear axles

Primary Applications

Road Construction, Surface Leveling, Site Preparation, Material Spreading, Snow Removal

Operational Metrics

Equipment Type

Heavy-Duty • Construction Machinery
