

Motor Grader Transmission

This heavy-duty motor grader transmission is designed for road construction and maintenance. It provides efficient grading and leveling with superior traction and maneuverability.

Overview

Heavy-Duty Motor Grader Transmission

This high-performance transmission is engineered for heavy-duty motor graders utilized in demanding road construction and maintenance environments. Designed for durability and precision, it supports machines equipped with powerful engines and robust hydraulic control systems. Its architecture ensures efficient power delivery to the moldboard and all-wheel drive systems, providing superior traction and maneuverability even on challenging terrain.

Technical Specifications

| | |
|---------------------|--|
| Model Identifier | PT160F |
| Primary Application | Road Construction, Road Maintenance, Grading, Leveling |

Performance Features

Operational Capabilities

- All-wheel drive support
- Precision hydraulic control compatibility
- High-torque power transmission
- Enhanced traction for challenging terrain
