

Motor Grader XG32001 Series

The XG32001 grader series is a robust earthmoving machine designed for precise grading and leveling. It delivers optimal performance in construction and road maintenance, featuring an adjustable moldboard and articulated frame.

Overview

XG32001 Series Motor Grader

The XG32001 series is a robust and versatile earthmoving machine engineered for precision grading and leveling of surfaces. Featuring a powerful engine and advanced hydraulic system, it delivers optimal performance across various construction and road maintenance applications. Its articulated frame enhances maneuverability in tight spaces, while the adjustable moldboard allows for precise material distribution in demanding projects.

Performance & Features

Operational Capabilities

- Precision material distribution
- Adjustable angle, tilt, and height on moldboard
- Enhanced maneuverability in tight spaces
- Optimized for construction and road maintenance

Key Features

Precision Grading, Articulated Frame, Adjustable Moldboard, High Visibility Cabin, Easy Maintenance

Design & Comfort

Operator Environment

Ergonomic Design • Enhanced Visibility • Operator Comfort
