

# Motor Magnetic Starter

This magnetic starter is an electromechanical device for safely starting and stopping electric motors. It includes a contactor and overload relay within a protective enclosure.

## Overview

### Industrial Motor Control

The Motor Magnetic Starter is an essential electromechanical device designed for the safe and reliable operation of electric motors. It integrates a contactor for circuit control and an overload relay for critical protection against excessive current draw. Housed in a durable enclosure, this unit prevents accidental contact with live components, making it a robust solution for diverse industrial applications.

## Technical Details

### Core Components

- Contactor
- Overload Relay
- Protective Enclosure

<b>Primary Function</b>	Start and stop electric motors safely
<b>Protection Features</b>	Overload Protection, Circuit Protection, Enclosed Housing
