

Motorcycle ABS Wheel Speed Sensor Wiring Harness

This is a replacement ABS wheel speed sensor wiring harness designed for motorcycle ABS systems. It features durable construction with high-quality wiring and connectors to ensure reliable performance and accurate signal transmission to the ABS control unit.

Product Overview

Reliable ABS Connectivity

This replacement ABS wheel speed sensor wiring harness is engineered to ensure seamless communication between your motorcycle's wheel speed sensors and the ABS control unit. Built with durable materials and high-quality connectors, it provides a stable and secure signal transmission essential for the proper operation of anti-lock braking systems. Designed for straightforward installation, this harness is a critical component for maintaining safety and braking performance across various ABS-equipped motorcycle models.

Technical Specifications

Construction Highlights

- High-quality wiring
- Durable connector housing
- Secure connection points
- Reliable signal integrity

Installation

Easy Installation • Direct Replacement

Application

Motorcycle ABS Systems

Primary Function

Signal transmission between wheel speed sensor and ABS control unit

Compatibility

ABS-equipped motorcycles, Standard ABS systems
