

Motorcycle Air Conditioning Compressor

This compressor is designed for use in motorcycle air conditioning or cooling systems. It features a pulley for belt-driven operation and connection points for refrigerant lines.

Product Overview

High-Performance Motorcycle Air Conditioning Compressor

This robust air conditioning compressor is engineered specifically for motorcycle cooling systems, ensuring reliable climate control performance. Featuring a durable metallic construction and a belt-driven pulley mechanism, it is designed to withstand the rigorous demands of automotive environments. The unit includes integrated ports for seamless connection to existing refrigerant lines, making it an essential component for system maintenance or upgrades.

Technical Details

Component Type	Air Conditioning Compressor
Drive Mechanism	Belt-driven pulley
Material	Metal
Application	Motorcycle Cooling System, HVAC Component
Port Configuration	Multi-port refrigerant integration
