

Motorcycle Air Conditioning Compressor

This air conditioning compressor is designed for motorcycle rider cooling. It features a compact design with multiple ports for refrigerant lines, suitable for integration into a motorcycle's air conditioning system.

Product Overview

Compact Cooling Solution

This motorcycle air conditioning compressor is engineered to provide efficient cooling for the rider, enhancing comfort during long rides in hot climates. Featuring a robust, compact metallic design, it is built to withstand the demanding environmental factors encountered on the road. The unit utilizes a belt-driven pulley system powered by the motorcycle's engine, ensuring reliable operation and seamless integration with existing air conditioning lines.

Technical Specifications

Material Finish

Metallic • Corrosion Resistant

System Integration

- Multi-port refrigerant connection
- Engine-powered pulley system
- Compact form factor

Drive Type

Belt-driven
