

Motorcycle Ball Race

This ball race is designed for motorcycle applications, specifically within the steering system. It provides smooth and efficient rotational movement for optimal performance.

Product Overview

High-Performance Motorcycle Ball Race

These precision-engineered ball races are designed specifically for motorcycle applications, ensuring smooth and efficient rotational movement. Built for durability and reliability, they are suitable for critical components such as steering systems and wheel hubs. With high load-bearing capacity and low friction, these components are essential for maintaining optimal motorcycle performance.

Technical Specifications

Available Models

- THA 0001
- THA 0002
- THA 0003
- THA 0004
- THA 0005

Gross Weight by Model

Model	Gross Weight
THA 0001	21
THA 0002	23
THA 0003	20
THA 0004	23
THA 0005	16

Dimensions: 31x30x40

Application

Recommended Use Cases: Steering Systems, Wheel Hubs, High Load Applications
