

Motorcycle Bluetooth Communication System

This Bluetooth communication system allows wireless communication between a rider and passenger. It features a flexible boom microphone and integrated volume controls.

Product Overview

Seamless Rider Communication

This wireless Bluetooth communication system is designed to provide clear and reliable audio transmission for both riders and passengers. Its ergonomic, compact design ensures comfort during extended use, while the integrated controls allow for effortless operation on the go. Perfect for hands-free communication, this device integrates seamlessly with your existing mobile setup.
