

Motorcycle Brake Hub Assembly

This is a high-quality motorcycle brake hub assembly, designed for either the front or rear wheel. The hub features a durable metal construction with mounting holes and a brake lever mechanism.

Product Overview

High-Performance Brake Hub Assembly

This motorcycle brake hub assembly is engineered for reliable and efficient braking performance. Constructed from durable, high-quality metal, it features a robust design suitable for demanding road conditions. The assembly includes an integrated brake lever mechanism and precise mounting points, ensuring compatibility and safety for your motorcycle's braking system.

Technical Details

Model ID	DY100
Construction Material	Durable Metal
Key Features	Integrated Brake Lever, Drum/Disc Compatible, High-Durability

Application

Compatibility
Front Wheel • Rear Wheel
