

Motorcycle Capacitive Discharge Ignition (CDI) Unit

This capacitive discharge ignition (CDI) unit is designed for motorcycle engines. It controls the timing and intensity of the spark delivered to the spark plug, ensuring optimal combustion and engine performance.

Product Overview

Capacitive Discharge Ignition (CDI) Unit

This capacitive discharge ignition unit is engineered to precisely control the timing and intensity of the spark delivered to motorcycle spark plugs. By ensuring optimal combustion, it promotes reliable engine starting and consistently efficient performance. Its robust construction is specifically designed to endure the demanding conditions of motorcycle operation, including high vibration, temperature fluctuations, and electrical noise.

Technical Specifications

Component Category

Motorcycle Parts • Ignition System

Installation

Multi-pin connector for plug-and-play integration

Durability Features

Vibration Resistant, Temperature Stable, Electrical Noise Shielded

Design Profile

Compact form factor for versatile mounting
